

imageData Group Sustainability Policy

For imageData Group, sustainability means advancing solutions that address local and global challenges whilst performing to the highest standards to meet the needs of our customers, staff and suppliers. Through collaboration we can make a positive contribution towards a sustainable world.

Our commitment to society and the environment is embedded in our company vision.

We have a relentless focus on reducing the impact of our products and operations in the environment.

We undertake to invest in technologies that move us towards becoming a zero net carbon business and we collaborate with our industry partners to achieve this goal.

We invest only in technology and processes that improve energy efficiency and reduce resource use.

We maintain programs designed to protect the health and safety of our colleagues.

Our sustainability policy focuses on three key areas: delivering sustainable and circular products, reducing our CO2 emissions and using only responsibly sourced materials.

Resource use and the circular economy

We will conserve natural resources by:

- Designing waste out of our products and processes in conjunction with suppliers and customers.
- Eliminating pollution by adopting low carbon technologies where these are available.
- Recycling materials at every stage, in-line with our zero to landfill policy.
- Developing products that improve the quality and sustainability of the environment and seek to eliminate all non-conforming products.

Reduction of CO2 emissions

We endeavor to reduce our carbon footprint by:

- Investing only in innovative and sustainable equipment to continually improve the efficiency of our manufacturing processes.
- Adopting low energy technologies.
- Implementing combined heat and power technology in our buildings.
- Taking steps to reduce vehicle movements for raw materials and finished goods.

Responsible sourcing of materials

We will improve the sustainability of our industry by:

- Maintaining an ethical sourcing policy in-line with the standards laid out by SEDEX (registered no. ZC40559300).
- Adherence to the management systems of ISO 14001.
- Promoting the use of recyclable materials to our customers.
- Working with suppliers to develop substrates manufactured from post-consumer waste.
- Supporting the Forestry Stewardship Council scheme (registration FSC-C002977).
